Catalogues included with first entry

NOTE: Bitches in Oestrus are not permitted to compete or be present at the event location

Mrs Eliza Perry - Weight Pull Judge

I purchased my first American Staffordshire Terrier in 2000 while I was living in Canberra. We competed in the conformation show rings in Canberra and surrounding NSW.

After moving to Melbourne, with a break from showing, 8 years ago I found out about obedience and dog sports. Since then I have actively promoted Weight Pull in Victoria for all breeds, and through the American Staffordshire Terrier Club of Victoria, have run the ANKC title Weight Pull events.

My current Amstaff male, Mack, Winyahart Mack Attack WWPB, is the first of his breed to pull over 1 tonne in Australia on a natural surface. He has an amazing determination to pull. Several of my dogs compete in this sport and others enjoy participating in Back Packing and Lure Coursing events, as well as competing in conformation Shows.

Basic information for competitors

- Harness: all dogs must use a correctly fitting harness, complete with spreader bar
- Trolley: 4 wheels for stability, with a measured empty weight offered for the first pull
- no heats will be conducted if the temperature rises over 20° C.
- the pull chute will be marked at a minimum of 3 m wide, with a pull distance of 5 metres.
- incremental weight increases are an average of 60 kgs.
- once the handler has signalled Ready, timing commences and the dog has 60 seconds to get the trolley moving.
- for this competition, the surface shall be artificial, meaning that the dog shall pull a minimum of 12 times its body weight to qualify
